OUTPUT TRANSFORMER CHART

A simplified selection of the proper transformer for use as a replacement in radio receivers or in the construction of audio amplifiers. **To use this chart,** check the first column for the tube being used, then read across for the applicable operating characteristics and correct Stancor transformer. In most cases, two Stancor part numbers are indicated in order to give a choice of mounting styles.

MULTI-PURPOSE INTERSTAGE—SPLIT SECONDARIES

May be used as single plate to single grid, single plate to push-pull grid, or push-pull plate to pysh-pull grid interstage transformers. Overall ratios are 1:3, but primaries are center-tapped and secondaries have split windings, providing ratios of 1:1, 3:1 and 6:1 in either step-up or step-down applications. For 7,000 to 15,000 ohm plate impedances.

DRIVER TRANSFORMERS

HANDY METHOD FOR APPROXIMATING THE PRIMARY TO SECONDARY RATIO REQUIRED OF A DRIVER TRANSFORMER IN CLASS B OR AB_2 SERVICE

Transformer ratio, primary: ½ secondary $= \frac{\sqrt{PZ_L}}{0.35E_S}$

where:

P = Driving power in watts required for tubes to be driven.

Z_L = Plate load impedance of driver tube(s) selected.

E_S = Peak grid-to-grid signal voltage required for tubes to be driven.

Factor values for this formula are data commonly found in tube manuals. Select driver tubes capable under typical operation of delivering 1.5 times the grid driving power requirements of the stage to be driven. Pentode or tetrode drivers should be operated with inverse feedback.

"POLY-PEDANCE" MODULATION

MULTI-TAPPED UNITS TO PROPERLY MATCH THE OUTPUT OF THE MODULATOR STAGE TO THE MODULATED LOAD. WILL MATCH ALL COMMON IMPEDANCES OF CLASS "B" MODULATOR (2,000 to 20,000 OHMS) TO CLASS "C" LOAD IMPEDANCES OF 2,000 TO 20,000 OHMS.

The number of excellent transmitting tubes available is constantly increasing. R.F. applications, too, have increased and it is sometimes difficult to obtain the correct modulation transformer suitable for matching some given modulator or R.F. load. These units give an almost unlimited range in power and impedance ratings to assure a correct impedance match in all cases.

high fidelity

STANCOR

HIGH FIDELITY OUTPUT TRANSFORMERS

These Stancor output transformers combine the most advanced design and manufacturing practices to provide outstanding audio response at low cost. The Stancor-Williamson amplifier, using high fidelity output A-8054, is typical of the exceptional results that can be obtained with these units.

As shown in the curve, these units have an excellent frequency response from 20 to 20,000 cps. They are designed to insure an extremely low level of intermodulation distortion over the entire frequency range, and **at any power level** within the rating of the transformer.

Type "C," upright shell mounting is used for all units. Shipping weight 6.5 pounds.

	Part No.	Pri. Imp. (P-P) In Ohms	Sec. Imp. in Ohms#	Max. Pri. D. C. Per Half	Max. Audio Watts	Height Overall	Base Area	Mtg. Ctrs.

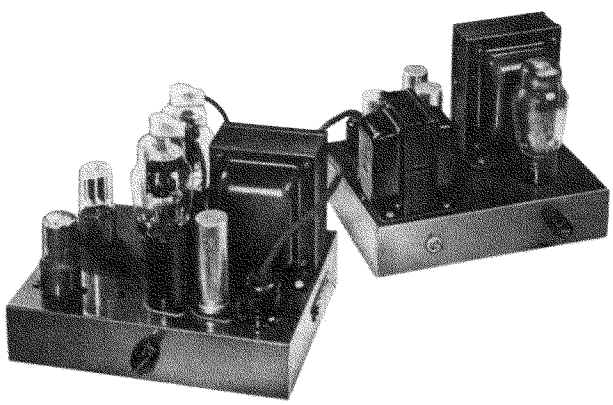
STANCOR-WILLIAMSON ULTRA-LINEAR HIGH FIDELITY AMPLIFIER

Now you can build an Ultra-Linear version of the famous Stancor-Williamson Amplifier using the newly developed Stancor output transformer A-8072. Schematics and parts list are described in Stancor Bulletin 479.

Owners of the Stancor -Williamson Amplifier can convert to Ultra-Linear operation with a few simple circuit changes and the installation of A-8072. Conversion instructions are included in Bulletin 479.

Stancor supplies a set of two completely punched and finished chassis for the Ultra-Linear amplifier; Chassis Set WM-8, $7.50 net. In addition to Stancor Ultra-Linear Output Transformer A-8072, $16.60 net, this amplifier uses power transformer PC8412, $9.53 net, and filter choke C-1411, $4.76 net. The other electronic components used cost about $45.00. They are all stock parts, and can be readily obtained from your Stancor distributor.



Write for Stancor Bulletin 479, it is available free of charge.

COMBINATION PLATE AND FILAMENT SUPPLY

The 8400 Series Power Transformers listed below cover 95% of today's power transformer needs. All primary windings for 117V-60 cycle operation unless otherwise indicated.

RECTIFIER TRANSFORMERS

Primary: 117 V., 50/60 Cycles

These transformers have been designed to operate in Full-Wave Center-Tapped or Bridge type circuits with readily available stock sizes of rectifiers. Each transformer has a tapped primary and a tapped additional winding. By using the primary taps and the aiding or bucking action of the additional winding . . . a wide range of output voltages can be obtained. For other details, terminal connections, output voltages, etc., write for Stancor bulletin No. 518R.

*Transformers and Rectifiers will have a higher temperature rise when operating with a capacitive load as compared to a resistive or inductive load for a given load current. If this is undesirable, extra ventilation should be provided or else the output current from the rectifier should be derated by approximately 20% from the values shown.

RT Footnotes: MFD. Filter Capacitor, 1—1,000, 2—500, 3—2,000, 4—4,000, 5—6,000, 6—3,000, 7—7,500, 8—12,000.
§Tolerance on all dimensions is plus or minus 1/16" except § = plus or minus ¼".

STEPUP-STEPDOWN AUTOTRANSFORMERS

60 Cycle Operation, 208V/230V, 230V/208V

Especially designed for use with air conditioners in converting a 208 volt unit to a 230 volt line. Converting from 230 volt unit to a 208 volt line is accomplished by a simple change of connections inside the outlet box.

	Part No.	Application	Height Overall	Base Area	Mtg. Ctrs.	Mtg. Type	Shpg. Wt. (Lbs.)

§**Testing Autoformers**—Designed especially for various service and test applications. Incorporates a convenient tap switch to permit variable voltages from 90 to 150 volts. It may be used to apply an overload voltage to amplifiers, radio receivers, or other electronic devices being serviced, which will indicate and cause suspected parts to break down.

LINE ADJUSTING AUTOTRANSFORMERS

RMS Test Insulation—1500 V.

Stancor Volt Adjusters permit operation of electrical devices at 115 volts when the supplied voltage is 65, 75, 90, 100, 115, 130 or 145. They are also useful for alternating at 115 volt line above or below that level. The line adjuster input is correctable in seven steps by means of a selector switch and is accurately indicated by an output voltmeter. The meter has a convenient red-line marker at 115 volts on a 150 volt scale. Output receptacle is permanently connected to 115 volt tap. All have type PV mounting.

	Part No. & Mtg. Type	VA‡	Input Voltage 50/60 Cycle	Nominal Output Voltage	Height	Base Area	Mtg. Ctrs.	Shpg. Wt. In Lbs.

*Built-in Electrostatic Shields are grounded to core internally.

ISOLATION TESTING TRANSFORMER*

RMS Test Insulation—1500 V.

Large enough to handle almost any television or radio receiver on test. Has three standard receptacles, providing output voltage of 105, 115 and 125, with 117 volts, AC, from the line for testing purposes or for correction of high or low line voltage. Has electrostatic shield.

DEFLECTION YOKES

All Stancor deflection yokes have ferrite cores and cosine wound distributed windings for anti-astigmatic focusing. Most units have networks and extra long leads. All yokes have molded coil forms that automatically orient the coils to provide a minimum of "crosstalk." Shipping weight 1.0 lbs.

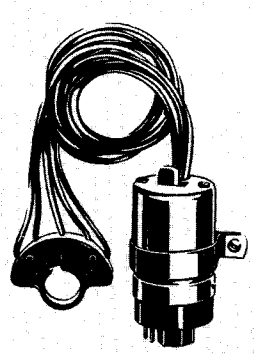
STANCOR CR TUBE BOOSTER, P-8192



- **No connections to solder.**
- **HI-LO switch provides two levels of brilliance.**
- **Does not require AC line connections.**
- **Measures only 3½" high, 1½" in diameter.**
- **Does not change CR tube space requirements.**

Adds months to the useful life of any dim electro-magnetic deflection CR tube—regardless of size—where dimming is due to low cathode emission. Installs in seconds. Just remove the CR tube connector and attach it to the booster. Then attach the connector plug of booster to the tube. If there is insufficient brilliance on "LO," flip the switch to "HI."

15" leads between the booster and the connector plug permit mounting anywhere in the set. Supplied with mounting bracket and screws. Shipping weight 0.5 pounds.

STANCOR EXACT REPLACEMENT FLYBACKS AND DEFLECTION YOKES
