### ENQUIRIES

Any enquiries in connection with this new Television receiver should be made by telephone or by letter to the Television Department, The Marconiphone Company Limited, Radio House, Tottenham Court Road, London, W.1. Telephone: Museum 4144 (11 lines).

## INTENDED MAINLY FOR CLUBS and RECEPTION ROOMS

This New Marconiphone Television Receiver is intended mainly for use in large rooms, clubs and in small halls. It is not intended for use in rooms of average size. Our existing Television receivers, models 701, 702, 703, 704, 705, are designed for normal domestic requirements and should be recommended for this purpose. This new receiver is, however, ideal for clubs, large reception rooms and for showrooms where it is desired to give demonstrations to a large party of people.

RADIO HOUSE, TOTTENHAM COURT ROAD,  
LONDON W.1

# MARCONIPHONE "LARGE-SCREEN" TELEVISION

**T**HE screen of this new instrument is 22 inches wide by 18 inches high. In clarity and definition the picture given is comparable in every way with that of the smaller Marconiphone Television receivers. The picture is obtained by means of an Emiscope projection tube which projects a detailed picture via a special  $f/1.5$  fully corrected projection lens on to the vertical screen via a 45 degree mirror.

In addition to the Television equipment the model also includes a standard Marconiphone 8-valve, all-wave sound receiver, 11-2,000 metres.

## **CABINET**

The cabinet is of the customary high quality Marconiphone style, made from selected walnut with attractive inlays.

Dimensions :—Height closed  $48\frac{1}{2}$  inches.  
Height with screen erected 66 inches.  
Width 40 inches.  
Depth  $24\frac{1}{4}$  inches.

The cabinet has a specially designed lid which when open, supports the viewing screen. A single movement opens the lid and adjusts the screen in its vertical position. The lid can also be closed with one single-handed movement.

## **CONSUMPTION**

Television 550 watts.  
Sound broadcast 127 watts.

The consumption is low for an instrument of this type. The instrument can, if necessary, be plugged into an ordinary lighting socket.

The standard A.C. voltage range is 200 to 250 volts, 50 cycles.
