CHASSIS

TS-9
TS-9A
TS-9B
TS-9C
TS-9D

BRIEF DESCRIPTION OF CHASSIS

Chassis TS-9. This television chassis has 22 tubes plus a 10" picture tube. The picture, sound and scanning circuits, together with their power supply, are contained on a single chassis. Four type 25Z6GT tubes, operating in a bridge circuit, are used to supply "B" power. It is designed to operate on 105 to 125 volts, 60 cycle alternating current.

Chassis TS-9A. Same as Chassis TS-9 except that the four 25Z6GT bridge circuit rectifier tubes are replaced with a conventional power supply circuit using 2 rectifier tubes (5Y3GT & 5U4G). The power transformer in this chassis differs from the one used in Chassis TS-9. A total of 20 tubes plus a 10" picture tube are used in this chassis.

Chassis TS-9B. Same as Chassis TS-9 except that a reflexed type audio circuit was added to obtain greater audio amplification. The 1st sound IF amplifier is used as a combination 21.9 Mc IF amplifier and as an audio amplifier.

Chassis TS-9C. Similar to Chassis TS-9A but has added sound IF stage to reduce variations in sound level with setting of contrast control. This chassis has 21 tubes plus a 10" picture tube.

Chassis TS-9D. A new clipping and horizontal synchronization system was incorporated in this chassis. V-13 (6SN7GT) was replaced by a 12AU7 and an additional 12AU7 and 6AL5 were added bringing the tube total to 23 plus a 10" picture tube. Two trimmer adjustments, "Horiz Lock-in" and "Horiz Fine Freq" were eliminated from the rear of the chassis. The "Horiz Oscillator" adjustment which was formerly on the top of the chassis was placed at the rear, and the "Focus" control pot which replaced the variable resistor in the late TS-9C chassis was retained in the TS-9D.

ANTENNA CONNECTIONS

By means of the four connection antenna receptacle, either a 75 ohm unbalanced, or 300 ohm balanced input is available. This receiver is normally wired to match a 300 ohm balanced line. If the receiver is to be used with a 75 ohm line, rewire the input circuit as shown in Figure 1.

Motorola Inc.

CHICAGO 51, ILLINOIS

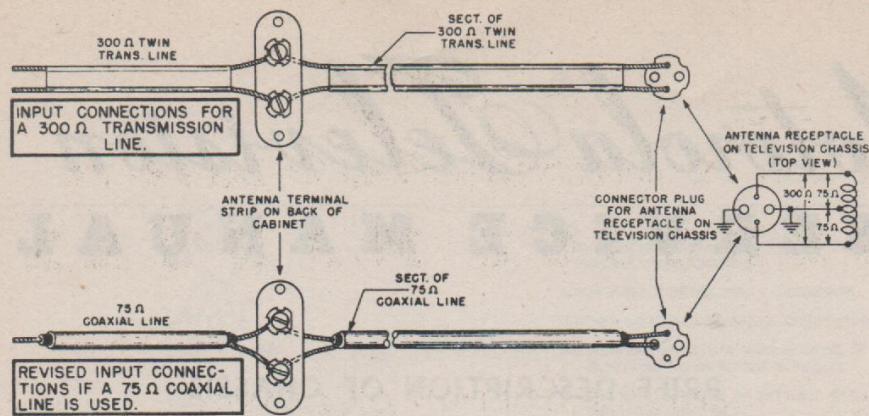

FIGURE 1. ANTENNA CONNECTIONS FOR 300 OR 75 OHM LINES

OPERATING CONTROLS

There are 8 controls on the front panel of your receiver. See Figure 2. Note that each front panel control is a dual control, consisting of a small knob and a large knob. The function of each control is indicated by markings on the front panel; the "circle" indicates the large knob while the "dot" indicates the small knob. See Figure 2 for front panel control functions.

NOTE: ● INDICATES LARGE OUTER KNOB. • INDICATES SMALL INNER KNOB.

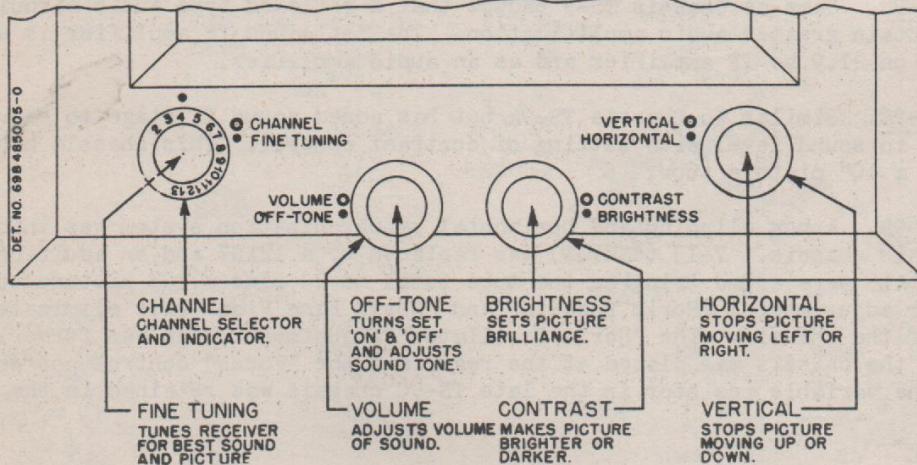

FIGURE 2. OPERATING CONTROLS

SERVICE ADJUSTMENT CONTROLS

The receiver is completely adjusted at the factory, so normally none other than the front panel control operating instructions need be followed in putting the receiver in operation. However, to provide for any misadjustment of the service controls, due to handling, the following instructions are in order. See Figures 3A, B & C for location of service adjustment controls.

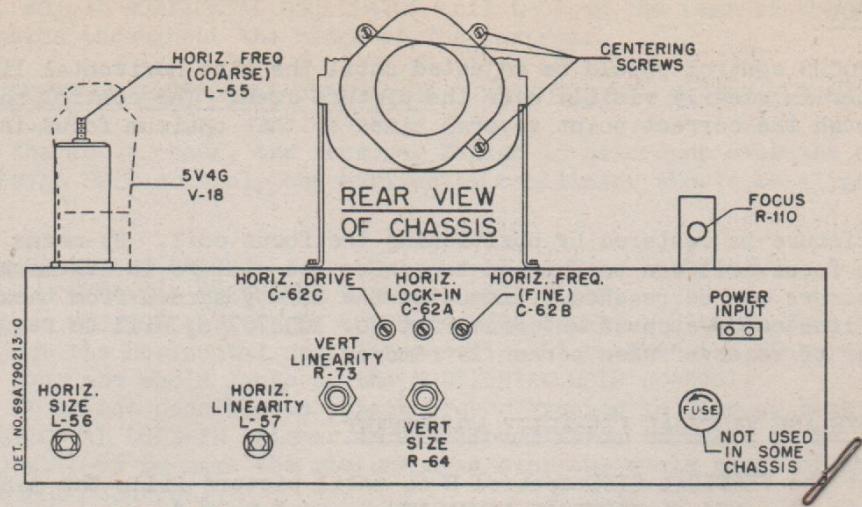

FIGURE 3A. CHASSIS TS-9, A, B & EARLY C SERVICE ADJUSTMENT CONTROL LOCATIONS

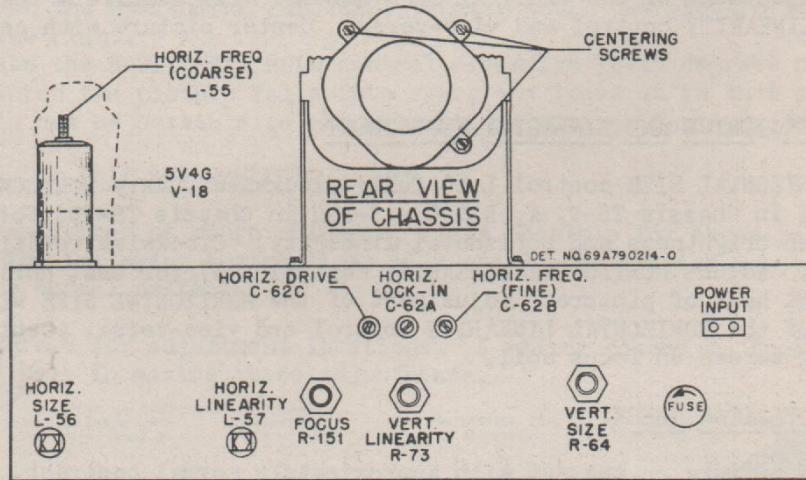

FIGURE 3B. CHASSIS TS-9C (LATE) SERVICE ADJUSTMENT CONTROL LOCATIONS

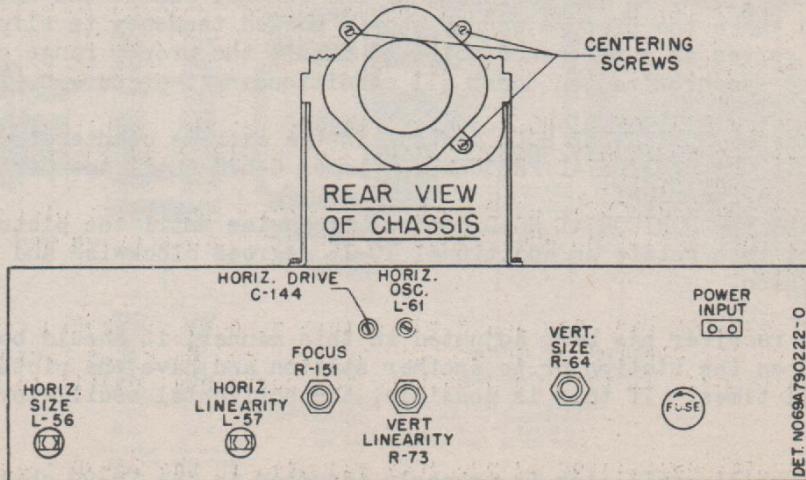

FIGURE 3C. CHASSIS TS-9D SERVICE ADJUSTMENT CONTROL LOCATIONS

FOCUS CONTROL

The FOCUS control should be adjusted until the fine horizontal line structure of the raster is clearly visible over the picture area. The control should be turned through the correct point several times so that optimum focus is obtained.

CENTERING

The picture is centered by positioning the focus coil. By means of three screws, the focus coil can be shifted to center the picture in its mask. These centering screws can be reached by removing the safety screen from back of receiver. A separate line cord, such as Motorola Part No. 30B470756, will be required to supply power to receiver when screen is removed.

VERTICAL SIZE AND VERTICAL LINEARITY ADJUSTMENT

Adjust the VERTICAL SIZE control R-64 until picture fills the mask vertically (6-3/8" minimum). Adjust VERTICAL LINEARITY control R-73 for best overall vertical linearity. Adjustment of the VERTICAL SIZE control will require a readjustment of the VERTICAL LINEARITY control and vice-versa. Center picture with centering screws on focus coil.

HORIZONTAL SIZE, DRIVE AND LINEARITY ADJUSTMENT

Turn HORIZONTAL SIZE control L-56 fully clockwise. Vary HORIZONTAL DRIVE trimmer (C-62C in Chassis TS-9, A, B & C - C-144 in Chassis TS-9D) for best compromise between brightness and horizontal linearity. Clockwise rotation increases picture width. Adjust HORIZONTAL LINEARITY control L-57 for best horizontal linearity on right half of picture. Adjustment of the HORIZONTAL SIZE will require a readjustment of the HORIZONTAL LINEARITY control and vice-versa. Center picture with centering screws on focus coil.

HORIZONTAL OSCILLATOR CHECK

Obtain a picture on the set with approximately normal contrast. Vary the HORIZONTAL HOLD control R-69B from one extreme to the other. The picture should remain in horizontal sync in all positions of the control except the extreme counterclockwise, and there the picture should show a marked tendency to slip to the right. This slippage serves as a reference point to insure the proper range of the hold control to give synchronization under all conditions. If picture fails to show this tendency to slip,

1. Leave the HORIZONTAL HOLD control in the extreme counterclockwise position
2. Adjust the HORIZONTAL FREQUENCY trimmer C-62B until the picture tends to slip to the right.
3. Rotate the HORIZONTAL HOLD control clockwise until the picture falls into sync, then rotate an additional 10-15 degrees clockwise and leave in that position.

When the receiver has been adjusted in this manner, it should be possible to switch off and on the station or to another station and have the picture in synchronization at all times. If this is possible, the horizontal oscillator is properly aligned.

The horizontal oscillator is properly adjusted in the TS-9D chassis if the picture remains in sync in all positions of the HORIZONTAL HOLD control. If this is

not the case, adjust HORIZONTAL OSCILLATOR coil L-61 on the rear of the chassis until the picture holds throughout the range of the control.

COMPLETE ALIGNMENT OF HORIZONTAL OSCILLATOR (CHASSIS TS-9, A, B & C ONLY)

If, in the above check, the receiver failed to hold sync over the proper range of the HORIZONTAL HOLD control, the horizontal oscillator should be aligned as follows:

1. Turn CONTRAST CONTROL for about normal picture contrast.
2. Turn HORIZONTAL FREQUENCY trimmer C-62B tight.
3. Adjust HORIZONTAL LOCK-IN trimmer C-62A to about 2 turns from tight.
4. Adjust the horizontal oscillator coil L-55 so that the picture will lock-in over the whole range of the HORIZONTAL HOLD control.
5. If it is not possible to obtain proper syncing in Step 4, back off on HORIZONTAL LOCK-IN trimmer an additional turn, or until it is possible to adjust L-55 to make the picture sync over the whole range of the HORIZONTAL HOLD control.
6. Turn the HORIZONTAL HOLD control to its extreme counterclockwise position.
7. Adjust the HORIZONTAL FREQUENCY trimmer until the picture tends to slip to the right.
8. Rotate the HORIZONTAL HOLD control clockwise 10-15 degrees past the point at which the picture falls into sync, and leave it in that position.

It should now be possible to change stations without losing synchronism.

ADJUSTMENT OF ION TRAP AND DEFLECTION YOKE

Under conditions of rough shipment, it is possible for these parts to become misaligned. The following instructions will enable the service man to bring the parts to their normal setting.

See Figure 4 for adjustment locations. A mirror placed in front of the receiver will help in making these adjustments.

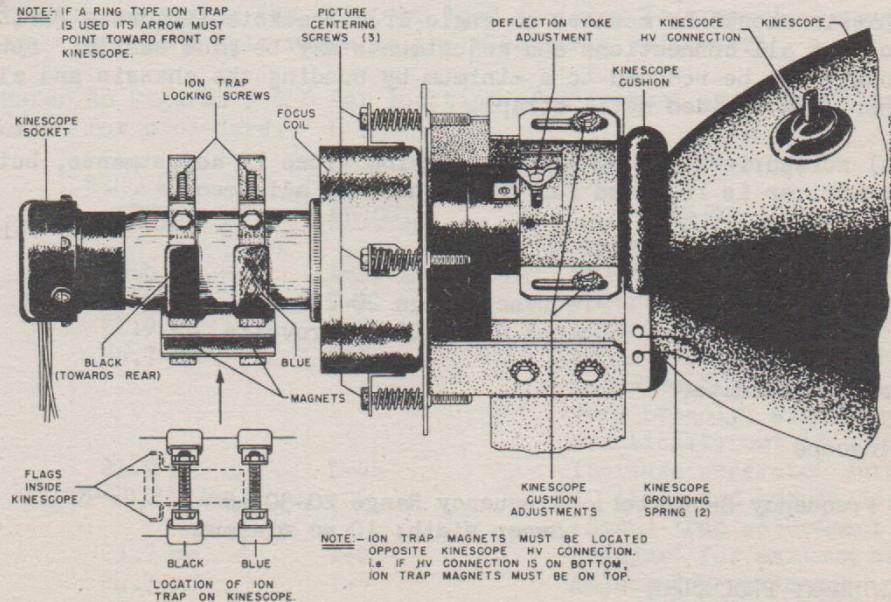

FIGURE 4. KINESCOPE ADJUSTMENT LOCATIONS

ADJUSTMENT OF THE ION TRAP

Two types of permanent magnet ion traps are used on the TS-9 series chassis. One is held in place with two clamps, colored black and blue; and the other slips over the neck of the tube and consists of a large and a small circular magnet.

Shifting of the ion trap will result in poor brilliancy, or shadowing of the corners. The ion trap should be mounted on the neck of the kinescope so that the black end, or large magnet, is toward the rear of the kinescope and approximately over the "flags" on the kinescope's gun structure. While observing the raster on the screen, move the ion trap slightly backward or forward, simultaneously turning it slightly to and fro until the brightest raster is obtained, and one in which none of the four corners are cut off or shadowed. These adjustments should be made with the brightest picture obtainable, consistent with good line focus and a full, square raster. When adjustment is completed, tighten screws to hold ion trap in position.

DEFLECTION YOKE ADJUSTMENT

If the deflection yoke shifts, the picture will be tilted. To correct, loosen the wing nut on top of the deflection yoke and rotate yoke till picture is straight. Before tightening wing nut, make certain that the deflection yoke is as far forward as possible.

ALIGNMENT

NOTE: The alignment procedure covers all chassis, through TS-9D.

GENERAL

The chassis should be mounted on angle iron brackets (Motorola Part Number 7B484018) so that all connections and adjustments may be made easily. Spurious response trouble may be reduced to a minimum by bonding the chassis and all instruments together with braided metal straps.

A metal screwdriver may be used for making video IF adjustments, but a plastic or fibre screwdriver is required for RF or sound IF alignment.

EQUIPMENT NECESSARY FOR ALIGNMENT

AM Signal Generator: Frequency Range 20-220 mc
Output 0-100,000 microvolts

Electronic Voltmeter

Oscilloscope

Sweep Frequency Generator: Frequency Range 20-30 mc
Sweep Width: 10 mc minimum

VIDEO IF ALIGNMENT PROCEDURE

It will be necessary to remove the kinescope to expose two video IF tuning

cores. A short screwdriver of 2 to 3 inches in length is convenient for making the adjustments.

1. Turn the channel selector switch to a blank channel, e.g., the position which would correspond to channel 14 or 15 if there were such marking on the switch. This disables the local oscillator and prevents spurious responses in the IF amplifier.

2. Turn the receiver on, and adjust the contrast control R-76B, for -5 volts bias, as measured from the variable tap of the control to chassis.

3. Apply a -3 volt bias to the mixer grid by means of a dry battery. Connect the positive terminal of the battery to ground and the -3 volt terminal to the point at which the two 470,000 ohm resistors (R-6 & R-7) in the mixer grid are connected.

4. Connect the signal generator output lead, through a blocking capacitor of 100 mmf to .01 mf, to the grid of the mixer tube V-2 (6J6, pin 5). The low side of the signal generator should be connected to the oscillator coil mounting plate near the mixer tube socket. To avoid regeneration, keep the grid and ground leads to the signal generator as short as possible.

5. Connect the electronic voltmeter across the video detector load resistor, R-48 (4700 ohms). With zero output from the generator, the meter should read less than 1 volt negative contact potential. A voltage appreciably greater than this indicates oscillation in the IF strip; and the generator lead connections, groundings, etc., should be checked.

In the TS-9D the video detector load resistor (R-48) is tied to B- instead of ground as in previous versions. Care should be taken to connect the voltmeter directly across the resistor and not to ground.

6. Adjust the output of the signal generator throughout alignment for no more than 1 volt increase across the detector load resistor to prevent overdriving the IF amplifier. Use the 3 volt range on the electronic voltmeter.

7. Refer to Figures 5 & 6 for location of alignment adjustments and to the following chart for procedure.

<u>STEP</u>	<u>SIG. GEN.</u>	<u>FREQ.</u>	<u>ADJUST</u>	<u>REMARKS</u>
1	23.6 mc	L-59 (or T-5)		Adjust for maximum.
2	26.4 mc	T-6		Adjust for maximum.
3	22.9 mc	T-7		Adjust for maximum.
4	25.7 mc	T-8		Adjust for maximum. NOTE: This adjustment will normally tune very broadly, since the core is practically out of coil.
5	21.9 mc (TS-9D, 21.7 mc)	L-44		Increase generator output about 10 times and adjust for minimum. (Sound trap adjustment).
6	25.7 mc	T-8		Readjust for maximum as in Step 4.
7	24.7 mc	T-9		Adjust for maximum.

The normal video IF sensitivity is less than 400 microvolts at 24.5 mc for an

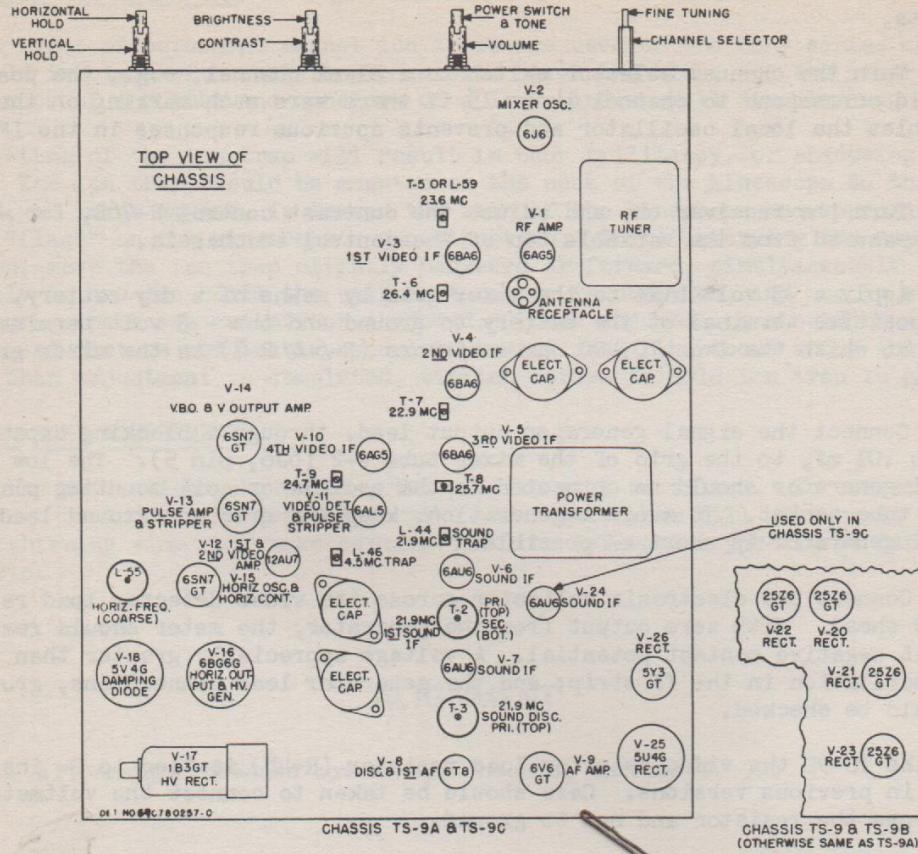

FIGURE 5. CHASSIS TS-9, A, B & C TUBE & IF ADJUSTMENT LOCATIONS

increase of 1 volt above contact potential, across the detector load, R-48, with -3 V. mixer bias and zero contrast bias.

The video IF amplifier response curve is shown in Figure 7. The bandwidth at the 3 db points should be approximately 3.5 mc. To check this with an AM generator, note the signal strength in microvolts necessary to produce an increase of approximately 1 volt above contact potential at 24.5 mc. Increase the generator input by 1.4 times and shift the generator frequency both sides of 24.5 mc until the original detector voltage reading is again obtained. These two new frequencies thus obtained are the 3 db skirt frequencies and should be approximately 22.9 mc and 26.4 mc. This measurement should be made with the -3 volt mixer bias and a -5 volt contrast bias.

As the video IF in the TS-9D is 26.2 mc instead of 26.4 mc, it will appear slightly above the 3 db point at 26.4 mc. If, when checking the response with a sweep generator, the picture carrier appears too high on the curve, adjustment of the 26.4 mc I.F. (T-6) will bring it down to the desired position.

4.5 MC TRAP ADJUSTMENT

1. Connect the signal generator to the plate of the video detector, V-11,

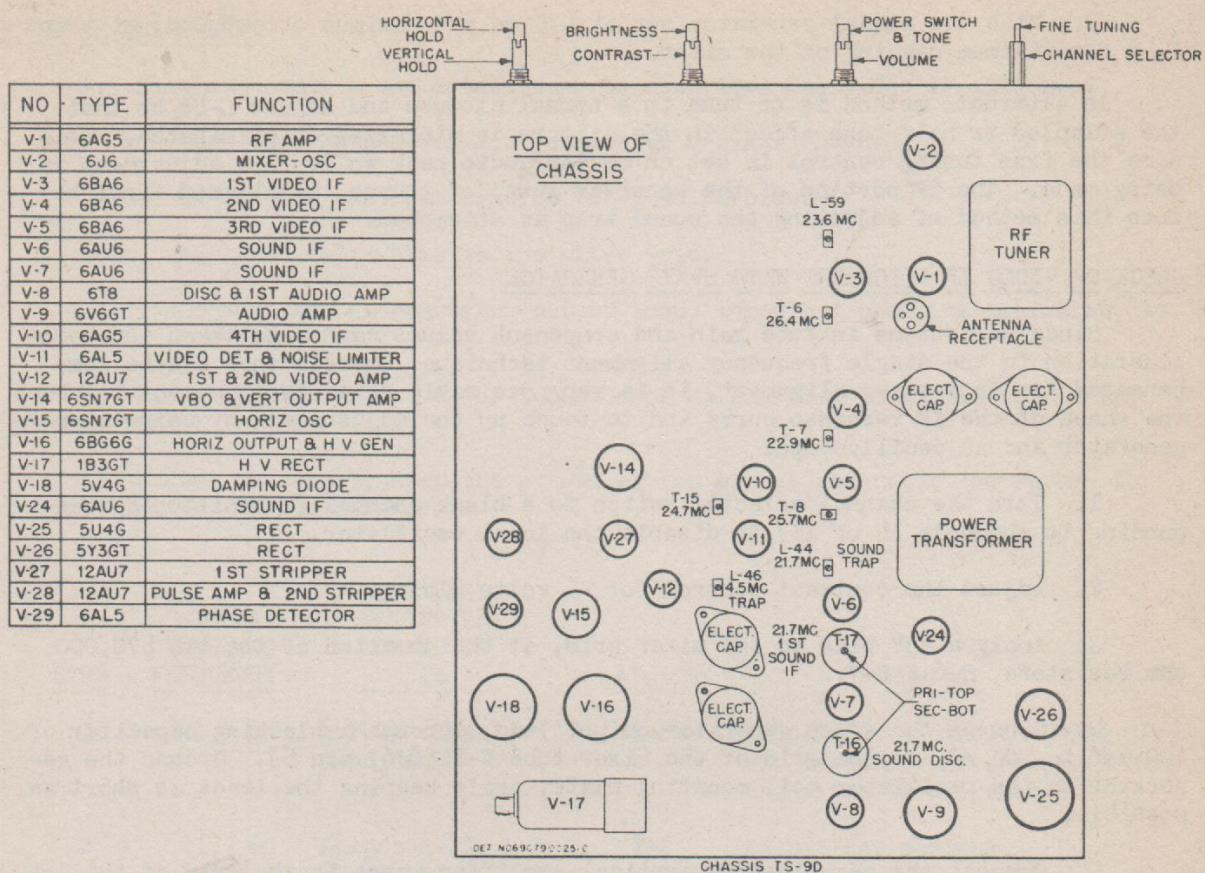

FIGURE 6. CHASSIS TS-9D TUBE & IF ADJUSTMENT LOCATIONS

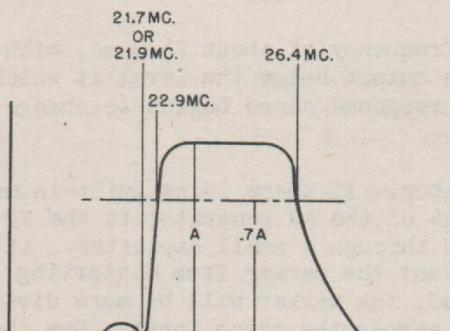

FIGURE 7. VIDEO IF RESPONSE WAVEFORM

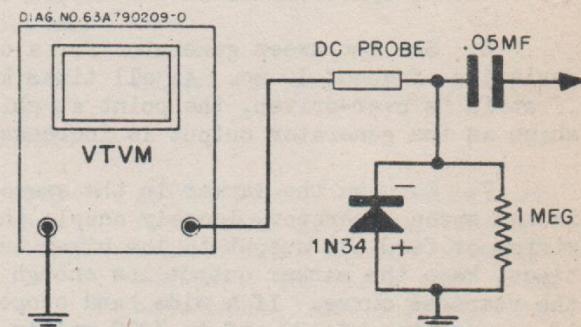

FIGURE 8. ELECTRONIC VOLTMETER CONNECTIONS

(6AL5, pin 7).

2. Connect the electronic voltmeter and germanium crystal rectifier, as shown in Figure 8, to the plate of the 2nd video amplifier, V-12 (12AU7, pin 6). Use the lowest voltage scale on the meter.

3. With the signal generator set at 4.5 mc and maximum output, adjust trap L-46 for minimum reading on the meter.

An alternate method is to tune in a normal picture and adjust L-46 so that the stippled or half-tone effect in the picture is minimized or eliminated. Make sure the fine tuning control is set on center audio peak while this adjustment is being made. The RF portion of the receiver must, of course, be aligned first before this method of adjusting the sound trap is attempted.

CHECK OF VIDEO IF ALIGNMENT WITH SWEEP GENERATOR

Since variations in tube gain and component values cannot be taken into consideration in the single frequency alignment technique, whereas they can be compensated for in a sweep alignment, it is very desirable after AM alignment to check the shape of the IF response curve and to touch up the adjustments by using a sweep generator and an oscilloscope.

1. Turn the channel selector switch to a blank channel (a position corresponding to channels 14 or 15) to disable the local oscillator.

2. Adjust the contrast control for -5 volts bias.

3. Apply a -3V bias to the mixer grid, at the junction of the two 470,000 ohm resistors, R-6 & R-7.

4. Connect the sweep generator output lead, through a blocking capacitor of 100 mmf to .01 mf, to the grid of the mixer tube V-2 (6J6, pin 5). Ground the generator to the oscillator coil mounting plate, again keeping the leads as short as possible.

5. Connect the oscilloscope vertical amplifier input to the grid of the 1st video amplifier, V-12 (12AU7, pin 2), or to the grid of the 2nd video amplifier, V-12 (12AU7, pin 7) if more gain is needed. Run a lead from the scope terminal on the sweep generator to the horizontal input on the oscilloscope; or use the built-in sawtooth, synchronized internally, whichever is preferred.

6. Set the sweep generator for a center frequency of about 24.0 mc, with a deviation of about 10 mc. At all times keep the output below the level at which the IF strip is over-driven, the point at which the response curve begins to change shape as the generator output is increased.

7. Turn on the marker in the sweep generator. If there is no built-in marker in the sweep generator, loosely couple the output of the AM generator to the IF strip, or feed the output to the mixer tube grid through a small capacitor. At all times, keep the marker output low enough to prevent the marker from distorting the response curve. If a wide band scope is used, the marker will be more distinct if a capacitor of 100 mmf to 1000 mmf is placed across the scope input. Use the smallest size possible, since too large a value will affect the shape of the curve.

8. Adjust the sweep and scope until one complete response curve appears on the screen.

9. Compare the curve with the ideal curve in Figure 7, using the marker to locate specific frequencies on the wave. If it is necessary to alter the shape of the curve, readjust the core closest in frequency to the point requiring correction.

SOUND IF ALIGNMENT

1. Make adjustments and connections as described for video IF alignment.
 - a. Turn the channel selector switch to a blank channel.
 - b. Adjust the contrast control to -5 volts bias.
 - c. Apply -3 volts bias to the mixer grid.
 - d. Connect the AM generator output lead, through a blocking capacitor, to the grid of V-2 (6J6, pin 5).

2. Refer to Figures 5 & 6 for location of alignment adjustments and to the following chart for procedure.

3. Except in step 1, keep the output of the signal generator low enough to prevent limiting during alignment.

<u>STEP</u>	<u>SIGNAL GENERATOR FREQUENCY</u>	<u>ELECTRONIC VOLTMETER CONNECTED TO</u>	<u>ADJUST</u>	<u>REMARKS</u>
1	21.9 mc	Across video det. load, R-48	L-44	Adjust for minimum. (This step not necessary if performed dur- ing video IF alignment).
2	21.9 mc	Across R-122 & R-14 (Junction of R-12 & R-13 on TS-9)	T-2 pri & sec.	Adjust for maximum.
3	-	-	T-3 sec (bottom)	Detune 2 turns counterclockwise.
4	21.9 mc	High side of volume control (Junction of Pri R-17 & R-23 on TS-9B)(top)	T-3	Adjust for maximum.
5	21.9 mc	Same as Step 4.	T-3 sec (bottom)	Adjust so that the meter indi- cates zero output as the vol- tage swings from one polarity to another. This is a very sharp adjustment. Use a fibre screw- driver.

NOTE: On chassis TS-9D, T-2 is T-17 and T-3 is T-16. The signal generator is set at 21.7 mc instead of 21.9 mc.

With -3 V. mixer bias and zero contrast bias, the normal audio sensitivity is as follows:

Chassis TS-9: 400 microvolts for 1/2 V. from junction of R-12 & R-13 (47K) to ground.

Chassis TS-9A: 400 microvolts for 1 V. across R-122 & R-14 (terminal #1 of T-2 to ground).

Chassis TS-9B: 400 microvolts for 1 V. across R-122 & R-14 (terminal #1 of T-2 to ground).

Chassis TS-9C: 100 microvolts for 1 V. across R-122 & R-14 (terminal #1 of T-2 to ground).

Chassis TS-9D: 100 microvolts for 1 V. across R-122 & R-14 (terminal #1 of T-17 to ground).

RF ALIGNMENT PROCEDURE

The locations of the various adjustments are given in Figure 9. It will be noted that the oscillator adjustments are arranged in a counterclockwise sequence on the front side of the chassis, starting with the #2 channel as the first adjustment at the top.

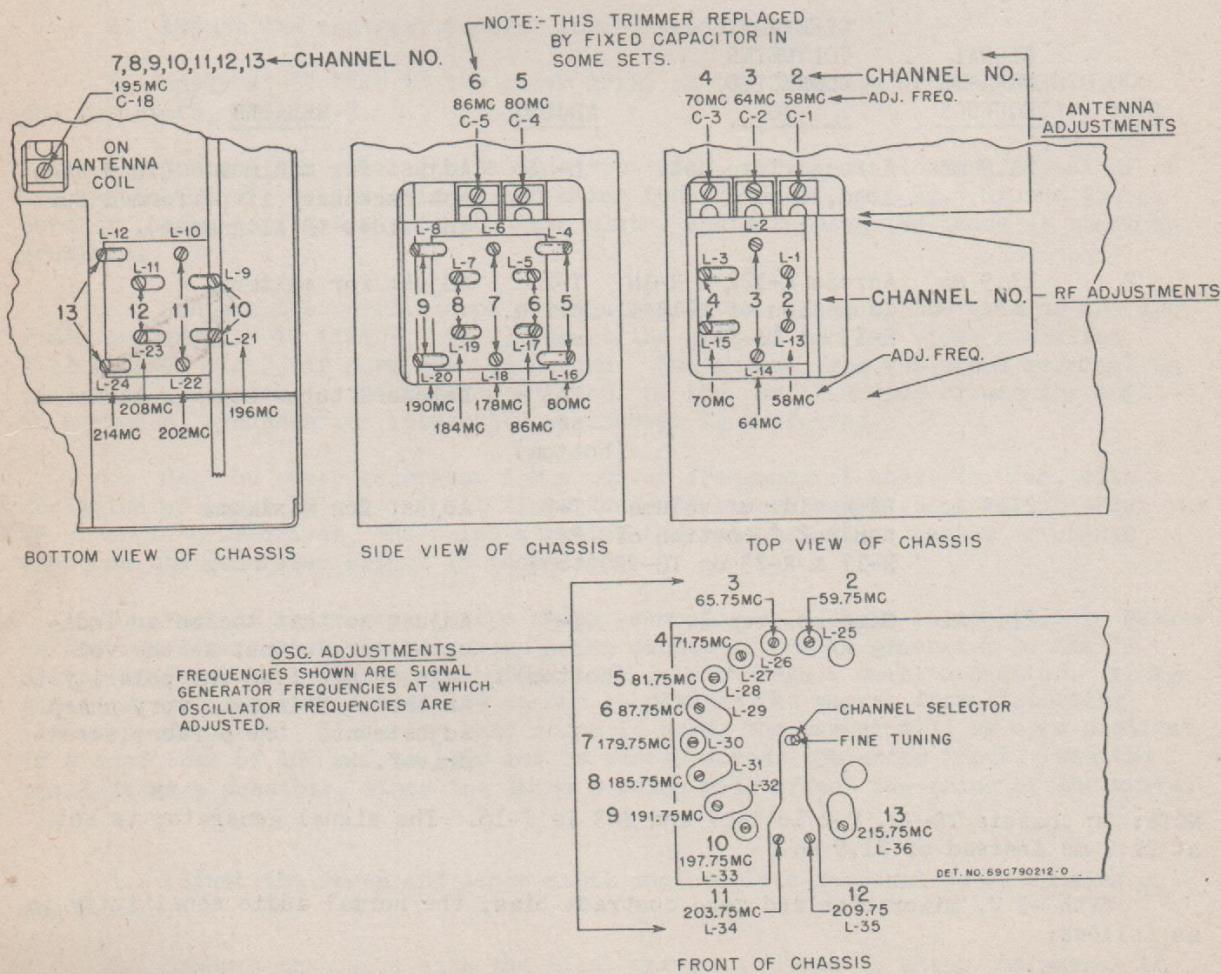

FIGURE 9. OSCILLATOR, RF & ANTENNA ADJUSTMENT LOCATIONS

The RF amplifier adjustments are located in a similar manner, starting at the top of the chassis and going around to the bottom. Both coils for each channel are placed together and then apart, alternately, in the channel sequence.

The antenna trimmers are also located in a counterclockwise manner, starting at the top of the chassis with #2 channel and going around to below the chassis.

TELEVISION FREQUENCY CHANNELS

CHANNEL	FREQ. BAND MC	PICTURE CARRIER	SOUND CARRIER	RECEIVER OSCILLATOR *
2	54-60	55.25	59.75	81.65
3	60-66	61.25	65.75	87.65
4	66-72	67.25	71.75	93.65
5	76-82	77.25	81.75	103.65
6	82-88	83.25	87.75	109.65
7	174-180	175.25	179.75	201.65
8	180-186	181.25	185.75	207.65
9	186-192	187.25	191.75	213.65
10	192-198	193.25	197.75	219.65
11	198-204	199.25	203.75	225.65
12	204-210	205.25	209.75	231.65
13	210-216	211.25	215.75	237.65

* In TS-9D chassis, reduce osc frequencies by 0.2 mc.

Procedure:

1. Connect the AM signal generator output cable to the antenna terminals of the receiver. Match the generator to the 300 ohm input impedance of the receiver by using a 100 ohm resistor in series with the output terminal of the generator cable and a 150 ohm resistor in series with the ground terminal. This arrangement is for a 50 ohm generator. If the generator impedance is 30 ohms, use a 120 ohm resistor on the output terminal and 150 ohms in series with the ground terminal.
2. Set the contrast control for -5 volts bias. (Measured from arm of contrast control to chassis).
3. When aligning the oscillator, connect the electronic voltmeter across the volume control (junction of R-17 (100K) & R-23 (47K) on chassis TS-9B).
4. Turn the channel switch to the channel to be aligned.
5. Set the fine tuning capacitor C-13 to half-capacity position.
6. Set the signal generator at the sound carrier frequency of the channel (see above chart) and adjust the signal generator output until a voltage reading is obtained on the electronic voltmeter, connected as in step 3.
7. Locate the oscillator tuning adjustment belonging to the channel being aligned. See Figure 9. With a non-metallic screwdriver, adjust the oscillator frequency until the reading on the meter is zero. The meter reading will change rapidly from one polarity, through zero, to the opposite polarity as the oscillator frequency is adjusted to produce the correct sound IF of 21.9 mc.

8. Proceed as above for each channel; and, if the fine frequency trimmer is left in the same position for each channel when the oscillator adjustments are made, very little retuning of the fine tuning control will be required in changing from one television station to the next.

9. With the oscillator correctly set, the next step is the alignment of the RF amplifier. The RF coils for all channels and the antenna trimmers for the first five channels are aligned at a frequency 1 mc higher than the center frequency of the channel under test; that is, 4 mc above the lower channel limit, or 2 mc below the upper limit. See chart above for channels and Figure 9 for alignment locations and frequencies.

10. Connect electronic voltmeter across the video detector load resistor R-48. In the TS-9P the video detector load resistor(R-48) is tied to B- instead of ground as in previous versions. Care should be taken to connect the voltmeter directly across the resistor and not to ground.

11. Set the signal generator to the RF alignment frequency and adjust the output for a reading on the voltmeter.

12. There are two coils for each RF channel. Using a non-metallic screwdriver, detune one core considerably in a counter-clockwise direction. Then tune the other for maximum output on the meter. Now, retune the first coil for maximum output, and the RF amplifier is aligned. Do not retune the other coil again for maximum, as this will not give a proper bandpass characteristic. Always keep the generator output low enough to prevent saturation.

13. Antenna coil trimmers are provided for channels 2 through 6. See Figure 9 for locations. They are peaked for maximum output on the meter at the same frequencies used for aligning the RF coils.

14. Capacitor C-18 is tuned at 195 mc and has enough bandwidth to work effectively over the high frequency channels.

15. Proceed as above for all channels.

RF ALIGNMENT CHECK

The signal generator is connected to the antenna terminals of the receiver and tuned to the center frequency of each channel. With the contrast control set for maximum gain, the sensitivity should be as follows:

<u>CHASSIS</u>	<u>VOLTMETER CONNECTED TO</u>	<u>VOLTAGE READING</u>	<u>MICROVOLTS CHANNELS 2-6</u>	<u>SENSITIVITY CHANNELS 7-13</u>
<u>Video Sensitivity</u>				
All TS-9 series	Video Det. Load (R-48)	1.0 V Increase	100	300
<u>Sound Sensitivity</u>				
TS-9	Junction of R-12 & R-13	.5 V	100	300

(Continued)

<u>CHASSIS</u>	<u>VOLTMETER CONNECTED TO</u>	<u>VOLTAGE READING</u>	<u>MICROVOLTS CHANNELS 2-6</u>	<u>SENSITIVITY CHANNELS 7-13</u>
TS-9A	Across R-122 & R-14	1.0 V	100	300
TS-9B	Across R-122 & R-14	1.0 V	100	300
TS-9C	Across R-122 & R-14	1.0 V	25	75
TS-9D	Across R-122 & R-14	1.0 V	25	75

The peak value of discriminator audio output voltage should be 1 volt or greater for a \pm 25 kc shift, with 1 volt of signal at the limiter grid. One volt exists at the limiter grid when 1 volt is measured across resistors R-122 and R-14 (chassis TS-9A, TS-9B, TS-9C, TS-9D) or 1/2 volt at junction of resistors R-12 and R-13 (chassis TS-9). The electronic voltmeter is connected across the volume control (chassis TS-9, TS-9A, TS-9C, TS-9D), or at the junction of resistors R-17 and R-23 (chassis TS-9B). The signal generator frequency is adjusted until a zero voltage reading is obtained and then is shifted \pm 25 kc from zero frequency.

14A489155	Sleeve, paper (focus control shaft insulator)doz.	.40
9B90116	Socket, kinescope: 12 pin; with leads	2.10
9K484167	Socket, tube: 7 prong miniature20
9A780011	Socket, tube: 7 prong miniature (for V-29)20
9A484835	Socket, tube: octal: steatite (for V-15)50
9K471270	Socket, tube: octal (for all octal tubes but V-17)20
9A480274	Socket, tube: octal (for V-17)20
9A485495	Socket, tube: 9 prong; noval (for V-8 & V-12)25
9K780353	Socket, tube & adapter: noval (for V-12, V-27, V-28)...	.35
2A470365	Speednut: #8A (vertical output trans mtg & on kinescope support bracket)25
41A70705	Spring, coil (for T-3, T-16, L-55)doz.	.15
41A484166	Spring, compression (on picture centering screws)doz.	.25
41A471379	Spring, kinescope support: 11" long25
31K90046	Strip, terminal: 5 insulated lugs, #4 ground, 3/8 spacing	.10
31A780523	Strip, terminal: 5 large insulated lugs, #4 ground, 1/2 spacing10
31A780374	Strip, terminal: 5 insulated lugs (#3 large), #4 ground, 3/8 spacing10
31K26658	Strip, terminal: 5 insulated lugs, #3 ground, 3/8 spacing	.10
31A780304	Strip, terminal: 5 insulated lugs, #2 ground, 3/8 spacing	.10
31K37494	Strip, terminal: 4 insulated lugs, #3 ground, 3/8 spacing	.10
31K471568	Strip, terminal: 4 insulated lugs, #2 ground, 3/8 spacing	.10
31K471565	Strip, terminal: 3 insulated lugs, #4 ground, 3/8 spacing	.05
31K51511	Strip, terminal: 3 insulated lugs, #3 ground, 3/8 spacing	.05
31K34326	Strip, terminal: 2 insulated lugs, #3 ground, 3/8 spacing	.05
31K90044	Strip, terminal: 2 insulated lugs, #2 ground, 3/8 spacing	.05
31K31217	Strip, terminal: 1 insulated lug, #2 ground, 3/8 spacing	.05
31K51251	Strip, terminal: 1 insulated lug, #1 ground, 3/8 spacing	.05
46A484807	Stud, socket mounting (V-3 socket)doz.	.35
24A489077 or	Trap, ion: permanent magnet type	2.35
24B484822	Wafer, electrolytic mounting: bakelite; for 4 lug capacitors35
9K471267	Washer, "C" spring (on focus control)per/c	.50
4K61642	Washer, fibre: 3/8 x 3/16 x 1/16 thick (part of focus control)15
4A470785	Washer, flat: 3/8 x .156 x .030; cad pl (tuner mtg)...per/c	.50
4S1720	Washer, spring (on focus control)(for 25W resistor)...doz.	.15
4A74936		

<u>Part Number</u>	<u>Description</u>	<u>List Price</u>
TUNING UNIT TT-3		
1X484850	Tuner TT-3 (complete)	55.00

NOTE: Replaceable electrical parts are included in Television Chassis TS-9 Replacement Parts List. It is recommended that entire tuner be returned for exchange if trouble develops in any of its major components.

Replaceable Mechanical Parts

43A4326	Ball, steel: 1/8" (fine tuning assembly)15
7B482263	Bracket, tuner support (rear end of tuner)25
43A489175	Bushing, knob; brass (channel selector)10
42A470100	Clip, coil mounting25
42A790007	Clip, fine tuning shaft retainer30
42A484849	Clip, spring: ball retainer (fine tuning assembly)10
3A470109	Core, coil adjusting screw: brass05
14A470146	Form, coil10
4S9754	Lockwasher, split: #5; blk nkl pl (front of switch assembly)50
4S7655	Lockwasher, internal: 3/8; cad pl (end of tuner switch)per/c	.50
2S7010	Nut, hex: 5-40 x 1/4; cad pl (front of switch assembly)per/c	.50
2S7004	Nut, hex: 3/8-32 x 9/16; cad pl (end of tuner switch) .doz.	.20
64K484855	Plate, shaft support (on front end)05
1X478290	Receptacle and Bracket Assembly (ant. receptacle)30
5S8497	Rivet: .088 x 1/8; steel; nkl pl (socket mtg)50
5S7707	Rivet: .122 x 5/32; steel; nkl pl (terminal strip mtg).per/c	.50
5S7701	Rivet: .122 x 3/16 steel; nkl pl (ant. receptacle)per/c	.50
3S7247	Screw, machine: 6-32 x 3/16 slotted lock hex head; cad pl (ant. receptacle)	1.00
3S7454	Screw, sheet metal: #8 x 1/4 PKZ plain hex head; cad pl)per/c	.50
3S7103	Setscrew: 8-32 x 1/8 Allen head (for knob bushing).....	.10
47K484851	Shaft, fine tuning35
26A471317	Shield, tube: with lead sleeve (for V-2)60
9A470781	Socket, tube: 7 prong miniature; ceramic60
41A485466	Spring, coil compression (fine tuning shaft assembly)..doz.	.25
41A482255	Spring, switch grounding (on front end of shaft)05
31K90046	Strip, terminal: 5 insulated lugs, #4 gnd, 3/8 spacing.	.10
31A76184	Strip, terminal: 2 insulated lugs, #1 gnd, 3/8 spacing.	.05

CABINET PARTS - MODELS VT-105, VK-106 & VT-107

1X484899	Back Cover(metal) & Line Cord Assembly (VT-105).....	4.25
1X780154	Back Cover (fibre) & Line Cord Assembly (VT-105)	4.95
1X489122	Back Cover (metal) Line Cord & Shield Assembly (VK-106)	5.05
1X489121	Back Cover (fibre) Line Cord & Shield Assembly (VK-106)	3.40
1X780013	Back Cover (metal) Line Cord & Shield Assembly (VT-107)	5.05
1X780012	Back Cover (fibre) Line Cord & Shield Assembly (VT-107)	5.15
37K471416	Band, rubber (on window retaining brackets)50
13K780037	Bezel, kinescope (VT-105, VK-106)	2.60
13K790012	Bezel, kinescope (VK-106B)	2.60

<u>Part Number</u>	<u>Description</u>	<u>List Price</u>
7A780026	Bracket, window retainer30
35A780318	Bumper, rubber (cabinet foot) (VT-105, VT-107)15
43A489006	Bushing, molded step: rubber (speaker cushions)30
16E484880	Cabinet, table model: brown mahogany (VT-105)	-
16K484881	Cabinet, table model: red mahogany (VT-105M)	-
16F489027	Cabinet, console: brown mahogany (VK-106)	-
16K489028	Cabinet, console: red mahogany (VK-106M)	-
16K489029	Cabinet, console: limed oak (VK-106B)	-
16E780062	Cabinet, table model: brown mahogany (VT-107)	-
16K780063	Cabinet, table model: red mahogany (VT-107M)	-
1X484869	Cable Assembly, antenna: 300 ohm antenna cable with 4 pin plug and 2 screw terminal strip85
13K780004	Cloth, grille (VK-106)	1.30
13K489060	Cloth, grille (VK-106M)	1.30
13K780603	Cloth, grille (VK-106B)	1.30
13B780047	Cloth, grille (VT-107)35
13K780048	Cloth, grille (VT-107M)35
30B470756	Cord, line, with plug & receptacle: 9 ft lg	1.50
1X780002	Cover Assembly, chassis bottom; with insulator (VT-105, VT-107)	4.75
15D489110	Cover Assembly, chassis bottom; with insulator (VK-106)	4.75
5S3127	Eyelet: .204 x .750; brass (spkr board mtg) (VK-106) ..doz.	.20
5S7831	Eyelet: .812 x .238; brass (spkr board mtg) (VT-105, VT-107)30
32C90053	Gasket, kinescope seal: felt (on window) (VT-105, VK-106)	1.75
14A780124	Insulator, electrolytic (chassis bottom)10
36K489177	Knob, control: walnut plastic (Channel Selector) (VT-105, VK-106, VT-107)60
36B489176	Knob, control: mahogany plastic (Channel Selector) (VT-105M, VK-106M, VT-107M)60
36K489178	Knob, control: tan plastic (Channel Selector)(VK-106B)	.60
36K489180	Knob, control: walnut plastic: large (Vertical Hold) (VT-105, VK-106, VT-107)20
36B489179	Knob, control: mahogany plastic; large (Vertical Hold) (VT-105M, VK-106M, VT-107M)20
36K489181	Knob, control: tan plastic; large; (Vertical Hold) (VK-106B)20
36K485490	Knob, control: walnut plastic; medium (Contrast & Volume) (VT-105, VK-106, VT-107)15
36B485489	Knob, control: mahogany plastic; medium (Contrast & Volume) (VT-105M, VK-106M, VT-107M)15
36K485491	Knob, control: tan plastic; medium (Contrast & Volume) (VK-106B)15
36K485478	Knob, control: walnut plastic; small (Brightness, Horizontal Hold & Off-tone) (VT-105, VK-106, VT-107) ..	.10
36A485477	Knob, control: mahogany plastic; small (Brightness, Horizontal Hold & Off-tone)(VT-105M, VK-106M, VT-107M) ..	.10
36K485479	Knob, control: tan plastic; small (Brightness, Horizontal Hold & Off-tone) (VK-106B)10
36K485481	Knob, control: walnut plastic; small (Fine Tuning) (VT-105, VK-106, VT-107)10
36A485480	Knob, control: mahogany plastic; small (Fine Tuning) (VT-105M, VK-106M, VT-107M)10

<u>Part Number</u>	<u>Description</u>	<u>List Price</u>
13K485482	Knob, control: tan plastic; small (Fine Tuning) (VK-106B)	.10
4S9751	Lockwasher, internal-external: #8; cad pl (spkr mtg)...per/c	.50
7S7003	Nut, hex: 8-32 x 5/16; cad pl (spkr mtg)50
2A484897	Nut, special: square; 1/4-20 (for chassis mtg screws) (VT-105, VT-107)05
2A489116	Nut, speed (chassis mtg, VK-106)50
22S1633	Pin, escutcheon: brass (channel indicator)50
22S1635	Pin, escutcheon: dark brown (VK-106B)50
28A470122	Plug, 4 pin (for antenna receptacle)10
5S7706	Rivet: .122 x 1/8; steel; nkl pl (insulator on bottom cover)50
5S2846	Rivet: .140 x 1/4; steel; statuary bronze finish (high voltage shield)15
5A470755	Rivet, shoulder (mounts line cord to metal cabinet back)	.05
5K780302	Rivet, shoulder (mounts line cord to fibre cabinet back)doz.	.25
64B484886	Screen, speaker: flocked; brown mahogany (VT-105, VT-105M)	.70
3A489007	Screw, decorative head; statuary bronze finish (spkr board mtg) (VT-105)30
3S2226	Screw, machine: 1/4-20 x 1-1/4; plain hex head; cad pl (chassis mtg, VK-106)50
3S488134	Screw, machine: 1/4-20 x 1-1/2; plain hex head; cad pl (chassis mtg, VT-105, VT-107)50
3S7536	Screw, sheet metal: #6 x 3/8 PKA slotted acorn head; antique copper finish (ant. terminal strip mtg)50
3S7455	Screw, sheet metal: #8 x 3/8 PKA slotted acorn head; antique copper finish (bottom & back cover mtg)15
3S8153	Screw, sheet metal: #8 x 3/4 PKA plain hex head; cad pl (bottom cover mtg) (VT-105, VT-107)15
3S7457	Screw, sheet metal: #8 x 7/8" PKA plain hex head; cad pl (cabinet feet) (VT-105, VT-107)15
3K27913	Screw, speaker mtg (mounts speaker to cushioned board)doz.	.20
3S1328	Screw, wood: #2 x 3/8 Phillips oval head (kinescope bezel)20
3S1321	Screw, wood: #6 x 3/8 slotted round head; statuary bronze finish (cabinet back mtg) (VK-106)50
3S8302	Screw, wood: #6 x 5/8 slotted acorn head; antique cop- per finish (bottom & back cover mtg)15
3S1332	Screw, wood: #6 x 1-1/4 round head; cad pl (speaker board mtg)20
29C780550	Shield, high voltage (on cabinet back) (VK-106, VT-107).	1.95
31A21990	Strip, terminal: 2 screw (ant. connection)10
4A484894	Washer, cut (on chassis mtg screws)(VT-105, VT-107) ...doz.	.25
4K485418	Washer, felt (under knobs)15
4S1722	Washer, flat: 7/16 x .187 x .048 stl; cad pl (cabinet feet) (VT-105, VT-107)15
4S7629	Washer, flat: 1/2 x 3/16 x .048 steel; cad pl (chassis bottom cover mtg)(VT-105, VT-107)50
4S7611	Washer, flat: 1/2 x 7/32 x .048; steel (speaker board mtg) (VK-106)15
4S7614	Washer, flat: 11/16 x 11/64 x .036 steel; cad pl (spe-aker board mtg) (VT-105, VT-107)15
4S8224	Washer, flat: 1" x 17/64 x .067; cad pl (chassis mtg, VK-106)20

<u>Part Number</u>	<u>Description</u>	<u>List Price</u>
LX471310	Window & Gasket Assembly: safety glass window with felt gasket (VT-105, VK-106)	4.15
LX780009	Window & Gasket Assembly: safety glass window with rubber gasket) (VT-107)	10.90
